

The results obtained in the studies providing the evidence-base for the CARE program model are consistent across:

Theory of change and outcomes: The results obtained aligned with those expected based on the Theory of Change for the CARE program model.

Child, staff, and organizational outcomes: The direction of changes in staff knowledge, beliefs and practices aligned with the results detected in reports from children as well as from data maintained in administrative records (i.e., behavioral incidents, use of physical restraints, use of psychotropic medication).

Multiple agencies: The changes reported after implementation of the CARE program model were consistent across as many as 13 agencies.

Multiple study designs: The results obtained in different study designs were consistent.
